### **GRIGENE** ICAM1 Rabbit Polyclonal Antibody – AP02637PU-S

Background:ICAM1 is a 85-110 kDa single chain type 1 integral membrane glycoprotein with an<br/>extracellular domain of five immunoglobulin superfamily repeats, a transmembrane region<br/>and a cytoplasmic domain. It shares considerable amino acid sequence homology with ICAM3<br/>and with ICAM2. ICAM1 is expressed by activated endothelial cells. It is detected on cells of<br/>many other lineages (e.g. epithelial cells, fibroblasts, chondrocytes, B lymphocytes, T<br/>lymphocytes (low), monocytes, macrophages, dendritic cells and neutrophils), with lower<br/>levels that increase in inflammation. ICAM1 is also detected in some carcinoma and<br/>melanoma cells. Soluble ICAM1 is detectable in the plasma and is elevated in patients with<br/>various inflammatory syndromes. It is the receptor for rhinoviruses and malaria.
