Product datasheet for AP02747PU-N

p38 (MAPK14) Rabbit Polyclonal Antibody

Product data:

| Product Type: | Primary Antibodies |
|-----------------------|---|
| Applications: | WB |
| Recommended Dilution: | Western Blot: 1:500~1:1000. |
| Reactivity: | Human, Mouse, Rat |
| Host: | Rabbit |
| Clonality: | Polyclonal |
| Immunogen: | The antiserum was produced against synthesized non-phosphopeptide derived from human P38MAPK around the phosphorylation site of tyrosine 182 (T-G-YP-V-A). |
| Specificity: | P38MAPK antibody detects endogenous levels of total P38MAPK protein. |
| Formulation: | PBS(without Mg2+ and Ca2+), pH 7.4 containing 150mM NaCl, 0.02% sodium azide and 50% glycerol State: Aff - Purified State: Liquid purified IgG |
| Concentration: | lot specific |
| Purification: | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen. |
| Conjugation: | Unconjugated |
| Storage: | Store the antibody at -20°C. Avoid repeated freezing and thawing. |
| Stability: | Shelf life: one year from despatch. |
| Gene Name: | mitogen-activated protein kinase 14 |
| Database Link: | <u>Entrez Gene 1432 Human</u> <u>Q16539</u> |

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

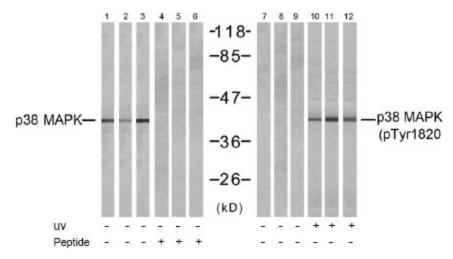

GRIGENE p38 (MAPK14) Rabbit Polyclonal Antibody – AP02747PU-N

Background:p38 is a 38 kDa Stress Activated Protein Kinase / Map Kinase (SAPK / MAPK) that is fully
activated by dual phosphorylation on threonine 180 and tyrosine 182, within the activation
loop. p38 MAPK plays a critical role in the initiation of G2 delay after ultraviolet radiation;
gene knock out studies have also revealed a critical role for p38 in cardiac remodeling.
Downstream targets of p38 include the transcription factors ELK1 and ATF2 and the kinases
MAPKAPK2 and MAPKAPK5. p38 MAPK plays a role in the production of IL6 and is thought to
stabilize erythropoietin production during hypoxic stress.
It is activated by environmental stress, many proinflammatory cytokines and
lipopolysaccharide. Dual phosphorylation by MAP2K3 and MAP2K6 is required for activation
of p38 MAPK. It interacts with MAX, Cdc25B, Cdc25C and binds to the kinase interaction
domain in the protein tyrosine phosphatase PTPRR; this interaction retains p38 MAPK in the
cytoplasm.

Synonyms:

Mitogen-activated protein kinase 14, p38 alpha, MXI2, SAPK2A, CSBP, CSBP1, CSBP2, CSPB1

Product images:

Western blot analysis of extracts from NIH-3T3 (Line 1, 4, 7 and 10) and COS7 (Line 2, 5, 8 and 11 and K562 (Line 3, 6, 9 and 12) cells, untreated or treated with UV (20min), using P38 MAPK antibody (Line 1, 2, 3, 4, 5 and 6) and P38 MAPK (pTyr182) antibody (Line 7, 8, 9, 10, 11 and 12).
