

# Product datasheet for AP06007PU-N

# AMPK alpha 1 (PRKAA1) Rabbit Polyclonal Antibody

# **Product data:**

#### **Product Type: Primary Antibodies Applications:** ELISA, IHC, WB Recommended Dilution: Western blot: 1/500-1/1000. Immunohistochemistry on Paraffin sections: 1/50-1/200. **Reactivity:** Human, Mouse, Rat Host: Rabbit Polyclonal **Clonality:** Synthetic peptide, corresponding to amino acids 150-200 of Human AMPKa1. Immunogen: This antibody detects endogenous levels of AMPK alpha-1 and AMPK alpha-2 protein (region Specificity: surrounding Asp168). Formulation: Phosphate buffered saline (PBS), pH 7.2 State: Aff - Purified State: Liquid purified lg fraction Preservative: 0.05% Sodium azide **Concentration:** 1.0 mg/ml **Purification:** Affinity chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE) **Conjugation:** Unconjugated Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Storage: Avoid repeated freezing and thawing. Stability: Shelf life: one year from despatch. Predicted Protein Size: ~ 63 kDa Gene Name: protein kinase AMP-activated catalytic subunit alpha 1 Database Link: Entrez Gene 5562 Human <u>Q13131</u>

### Serigene AMPK alpha 1 (PRKAA1) Rabbit Polyclonal Antibody – AP06007PU-N

Background:AMPK is a heterotrimeric complex comprising a catalytic α subunit and regulatory β and γ<br/>subunits. It protects cells from stresses that cause ATP depletion by switching off ATP-<br/>consuming biosynthetic pathways. AMPK is activated by high AMP and low ATP through a<br/>mechanism involving allosteric regulation, promotion of phosphorylation by an upstream<br/>protein kinase known as AMPK kinase, and inhibition of dephosphorylation. Activated AMPK<br/>can phosphorylate and regulate in vivo hydroxymethylglutaryl-CoA reductase and acetyl-CoA<br/>carboxylase, which are key regulatory enzymes of sterol synthesis and fatty acid synthesis,<br/>respectively. The human AMPKα1 and AMPKα2 genes encode 548 amino acid protein and human<br/>AMPKβ2 encodes a 272 amino acid protein. The human AMPKγ1 gene encodes a 331 amino<br/>acid protein. Human AMPKγ2 and AMPKγ3, which are 569 and 492 amino acid proteins,<br/>respectively, contain unique N-terminal domains and may participate directly in the binding<br/>of AMP within the AMPK complex.

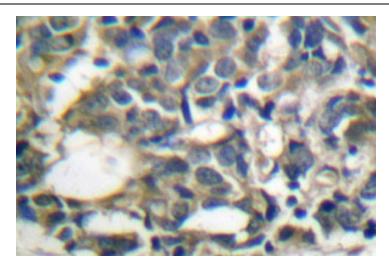

Synonyms: PRKAA1, PRKAA2, AMPK alpha-2 chain, AMPK alpha-1 chain
