| Product Type:           | Primary Antibodies  |
|-------------------------|---|
| Applications:           | IHC, IP, WB   |
| Recommended Dilution:   | Immunoprecipitation: 1/50-1/200.<br>Immunohistochemistry on Paraffin sections: 1/50-1/200.<br>Western blot: 1/500-1/1000.                   |
| Reactivity:             | Human, Mouse, Rat   |
| Host:                   | Rabbit  |
| Clonality:              | Polyclonal  |
| Immunogen:              | Synthetic peptide, corresponding to amino acids 201-250 of Human c-Jun.   |
| Specificity:            | This antibody detects endogenous levels of AP-1 / c-Jun protein (region surrounding Gly237).  |
| Formulation:            | Phosphate buffered saline (PBS), pH 7.2.<br>State: Aff - Purified<br>State: Liquid purified Ig fraction<br>Preservative: 0.05% Sodium azide |
| Concentration:          | 1.0 mg/ml   |
| Purification:           | Affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-<br>PAGE)  |
| Conjugation:            | Unconjugated  |
| Storage:                | Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer.<br>Avoid repeated freezing and thawing.                        |
| Stability:              | Shelf life: one year from despatch.   |
| Predicted Protein Size: | ~36, 43, 48 kDa   |
| Gene Name:              | Jun proto-oncogene, AP-1 transcription factor subunit   |
| Database Link:          | <u>Entrez Gene 3725 Human</u><br><u>P05412</u>  |

### **GRIGENE** c-Jun (JUN) Rabbit Polyclonal Antibody – AP06055PU-N

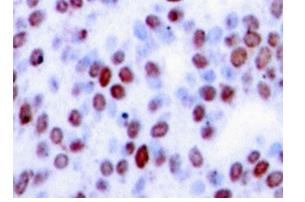

Background: The c-Jun proto-oncogene was first identified as the cellular homolog of the avian sarcoma virus v-Jun oncogene. The c-Jun protein, along with c-Fos, is a component of the AP-1 transcriptional complex. c-Jun can form either Jun/Jun homodimers or Jun/Fos heterodimers via the leucine repeats in both proteins. Homo- and heterodimers bind to the TGACTCA consensus sequence present in numerous promoters and initially identified as the phorbol ester tumor promoter response element (TRE). Two additional genes, Jun B and Jun D, have been shown to be almost identical to c-Jun in their C-terminal regions, which are involved in dimerization and DNA binding, whereas their N-terminal domains, which are involved in transcriptional activation, diverge. All three form heterodimers among themselves and with c-Fos and other members of the Fos gene family.

Synonyms: Transcription factor AP1
