Due du et Turner	Duins on Antike dies
Product Type:	Primary Antibodies
Applications:	IF, IHC, WB
Recommended Dilution:	Western blot: 1/500-1/1000. Immunohistochemistry on paraffin sections: 1/50-1/200. Immunofluorescence: 1/50-1/200.
Reactivity:	Human, Mouse, Rat
Host:	Rabbit
Clonality:	Polyclonal
Immunogen:	Synthetic peptide, corresponding to the C-terminual of Human HDAC 9.
Specificity:	This antibody detects endogenous levels of HDAC9 protein. (region surrounding Pro1047)
Formulation:	Phosphate buffered saline (PBS), pH 7.2. State: Aff - Purified State: Liquid purified Ig fraction Preservative: 0.05% sodium azide
Concentration:	1.0 mg/ml
Purification:	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE)
Conjugation:	Unconjugated
Storage:	Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing.
Stability:	Shelf life: one year from despatch.
Predicted Protein Size:	~ 111, 160 kDa
Gene Name:	histone deacetylase 9
Database Link:	<u>Entrez Gene 9734 Human</u> <u>Q9UKV0</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2025 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

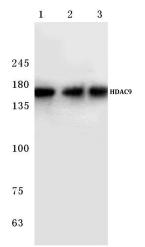

GRIGENE HDAC9 Rabbit Polyclonal Antibody – AP06163PU-M

Background:The remodeling of chromatin is a critical component of ranscriptional regulation and the
acetylation of nucleosomal histones is a major source of this remodeling. Acetylation of lysine
residues in the amino terminal tail domain of histone results in an allosteric change in the
nucleosomal conformation and an increased accessibility to transcription factors by DNA.
Several mammalian proteins function as nuclear histone acetylases, including GCN5, PCAF
(p300/CBP-associated factor), p300/CBP, HAT1 and the TFIID subunit TAF II p250. Conversely,
the deacetylation of histones is associated with transcriptional silencing. The histone
deacetylases (HDAC) include HDAC1–9. HDAC9 and HDAC9a are two alternatively spliced
isoforms of HDAC9. HDAC9a is 132 amino acids shorter than HDAC9, but both isoforms
contain the HDAC catalytic domain, remain capable of deacetylase activity and repress
myoctye enhancer-binding factor 2-mediated transcription.

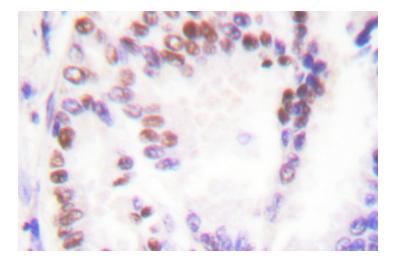

Synonyms:

HDAC7B, HDRP, KIAA0744, MITR, Histone deacetylase 9, HD9, HD7B
