

# Product datasheet for AP06320PU-M

# Na+ channel protein (pan) Rabbit Polyclonal Antibody

## **Product data:**

#### **Product Type: Primary Antibodies Applications:** IF, IHC, WB Recommended Dilution: Western blot: 1/500-1/1000. Immunohistochemistry on paraffin sections 1/50-1/200. Immunofluorescence: 1/50-1/200. **Reactivity:** Human, Mouse, Rat Host: Rabbit **Clonality:** Polyclonal Immunogen: Synthetic peptide, corresponding to amino acids 1470-1520 of Human SCN5A. Specificity: This antibody detects endogenous levels of Sodium Channel-pan protein. (region surrounding Lys1493) Formulation: Phosphate buffered saline (PBS), pH~7.2 State: Aff - Purified State: Liquid purified Ig fraction (> 95% pure by SDS-PAGE). Preservative: 0.05% Sodium Azide **Concentration:** 1.0 mg/ml **Purification:** Affinity Chromatography using epitope-specific immunogen. **Conjugation:** Unconjugated Storage: Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing. Stability: Shelf life: one year from despatch. Predicted Protein Size: ~ 230 kDa

### Serigene Na+ channel protein (pan) Rabbit Polyclonal Antibody – AP06320PU-M

Background:Epithelial sodium channels are amiloride-sensitive members of the Degenerin/epithelial<br/>sodium channel (Deg/ENaC) superfamily of ion channels. Members of this superfamily of ion<br/>channels share organizational similarity in that they all possess two short intracellular amino<br/>and carboxyl termini, two short membrane spanning segments, and a large extracellular loop<br/>with a conserved cysteine-rich region. There are three homologous isoforms of the ENaC<br/>(alpha, beta, and gamma) protein. ENaC in the kidney, lung, and colon plays an essential role<br/>in trans-epithelial sodium and fluid balance. ENaC also mediates aldosterone-dependent<br/>sodium reabsorption in the distal nephron of the kidney, thus regulating blood pressure.<br/>ENaC is thought to be regulated, in part, through association with the cystic fibrosis<br/>transmembrane conductance regulator (CFTR) chloride ion channel. Gain-of-function<br/>mutations in beta- or gamma-ENaC can cause severe arterial hypertension (Liddel's<br/>syndrome) and loss-of-function mutations in alpha- or beta-ENaC causes<br/>pseudohypoaldosteronism (PHA-1).

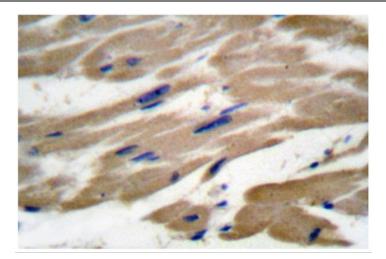

Synonyms: Sc

Sodium channel protein pan
