STAT3 Rabbit Polyclonal Antibody – AP06327PU-S

Background:Membrane receptor signaling by various ligands, including interferons and growth hormones
such as EGF, induces activation of JAK kinases which then leads to tyrosine phosphorylation of
the various Stat transcription factors. Stat1 and Stat2 are induced by IFN-α and form a
heterodimer which is part of the ISGF3 transcription factor complex. Although early reports
indicate Stat3 activation by EGF and IL-6, it has been shown that Stat3β appears to be
activated by both while Stat3α is activated by EGF, but not by IL-6. Highest expresion of Stat4
is seen in testis and myeloid cells. IL-12 has been identified as an activator of Stat4. Stat5 has
been shown to be activated by Prolactin and by IL-3. Stat6 is involved in IL-4 activated
signaling pathways.

Synonyms:

STAT-3, Acute-phase response factor, APRF
