These receptors exhibit high degrees of sequence relatedness to each other as well<br/>as lesser degrees of relatedness to the class III receptors including CSF-1/Fms, PDGR, SLFR/Kit<br/>and Flt-3/Flk-2. Two members of this receptor class, Flt-1 and Flk-1, have been shown to<br/>represent high affinity receptors for vascular endothelial growth factors (VEGFs). On the basis<br/>of structural similarity to Flt and Flk-1, it has been speculated that Flt-4 might represent a<br/>third receptor for either VEGF or a VEGF-related ligand.
