Product Type:	Primary Antibodies
Applications:	IHC, WB
Recommended Dilution:	Western blot: 1/500-1/1000. Immunohistochemistry on paraffin sections: 1/50-1/200.
Reactivity:	Human, Mouse, Rat
Host:	Rabbit
Clonality:	Polyclonal
Immunogen:	Synthetic peptide, corresponding to amino acids 351-400 of Human Chk2.
Specificity:	This antibody detects endogenous levels of Chk2 protein. (region surrounding Ser379)
Formulation:	Phosphate buffered saline (PBS), pH 7.2. State: Aff - Purified State: Liquid purified Ig fraction Preservative: 0.05% sodium azide
Concentration:	1.0 mg/ml
Purification:	Affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS- PAGE)
Conjugation:	Unconjugated
Storage:	Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing.
Stability:	Shelf life: one year from despatch.
Predicted Protein Size:	~ 62 kDa
Gene Name:	checkpoint kinase 2
Database Link:	<u>Entrez Gene 11200 Human</u> <u>O96017</u>

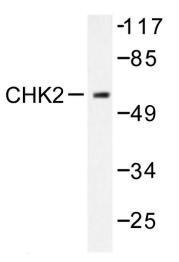

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### Chk2 (CHEK2) pSer379 Rabbit Polyclonal Antibody – AP06512PU-N

Background:Cell cycle events are regulated by the sequential activation and deactivation of cyclin<br/>dependent kinases (Cdks) and by proteolysis of cyclins. Chk1 and Chk2 are involved in these<br/>processes as regulators of Cdks. Chk1 and Chk2 both function as essential components in the<br/>G2 DNA damage checkpoint by phosphorylating Cdc25C in response to DNA damage.<br/>Phosphorylation inhibits Cdc25C activity, thereby blocking mitosis. Cdc25A, Cdc25B and<br/>Cdc25C protein tyrosine phosphatases function as mitotic activators by dephosphorylating<br/>Cdc2 p34 on regulatory tyrosine residues. It has also been shown that Chk1 can<br/>phosphorylate Wee 1 in vitro, providing evidence that the hyperphosphorylated form of Wee<br/>1, seen in cells delayed by Chk1 overexpression, is due to phosphorylation by Chk1.

Synonyms: CHEK2, CHEK-2, CHK-2, RAD53, Cds1
