

Product datasheet for AP06600PU-S

FAK (PTK2) Rabbit Polyclonal Antibody

Product data:

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Primary Antibodies
Applications:	IHC, WB
Recommended Dilution:	Western blot: 1/500-1/1000. Immunohistochemistry on paraffin sections: 1/50-1/200.
Reactivity:	Human, Mouse, Rat
Host:	Rabbit
Clonality:	Polyclonal
Immunogen:	Synthetic peptide, corresponding to amino acids 370-420 of Human FAK.
Specificity:	This antibody detects endogenous levels of FAK protein. (region surrounding lle401)
Formulation:	Phosphate buffered saline (PBS), pH 7.2. State: Aff - Purified State: Liquid purified lg fraction Preservative: 15 mM sodium azide
Concentration:	1.0 mg/ml
Purification:	Affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS- PAGE)
Conjugation:	Unconjugated
Storage:	Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing.
Stability:	Shelf life: one year from despatch.
Predicted Protein Size:	~ 125 kDa
Gene Name:	protein tyrosine kinase 2
Database Link:	<u>Entrez Gene 5747 Human</u> <u>Q05397</u>

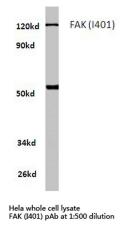

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2025 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

GRIGENE FAK (PTK2) Rabbit Polyclonal Antibody – AP06600PU-S

Background:Focal adhesion kinase was initially identified as a major 125 kDa substrate for the intrinsic
protein tyrosine kinase activity of Src-encoded pp60. The deduced amino acid sequence of
FAK p125 has shown it to be a cytoplasmic protein tyrosine kinase whose sequence and
structural organization are unique as compared to other proteins described to date.
Localization of p125 by immunofluorescence suggests that it is primarily found in cellular
focal adhesions leading to its designation as focal adhesion kinase (FAK). FAK is concentrated
at the basal edge of only basal keratinocytes that are actively migrating and rapidly
proliferating in repairing burn wounds, and is activated and localized to the focal adhesions
of spreading keratinocytes in culture. Thus, it has been postulated that FAK may have an
important in vivo role in the re-epithelialization of human wounds. FAK protein tyrosine
kinase activity has also been shown to increase in cells stimulated to grow by use of
mitogenic neuropeptides or neurotransmitters acting through G protein-coupled receptors.

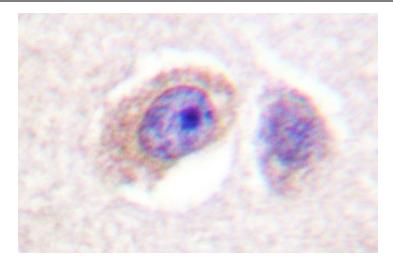

Synonyms: FAK, Focal adhesion kinase 1, FADK1, pp125FAK, Protein-tyrosine kinase 2
