Product Type:	Primary Antibodies
Applications:	IHC, WB
Recommended Dilution:	Western blot: 1/500-1/1000. Immunohistochemistry on paraffin sections: 1/50-1/200.
Reactivity:	Human, Mouse
Host:	Rabbit
Clonality:	Polyclonal
Immunogen:	Synthetic peptide, corresponding to amino acids 200-250 of Human Hox-B9.
Specificity:	This antibody detects endogenous levels of Hox-B9 protein. (region surrounding Arg237)
Formulation:	Phosphate buffered saline (PBS), pH 7.2. State: Aff - Purified State: Liquid purified Ig fraction Preservative: 0.05% sodium azide
Concentration:	1.0 mg/ml
Purification:	Affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS- PAGE)
Conjugation:	Unconjugated
Storage:	Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing.
Stability:	Shelf life: one year from despatch.
Predicted Protein Size:	~ 28 kDa
Gene Name:	homeobox B9
Database Link:	<u>Entrez Gene 3219 Human</u> <u>P17482</u>

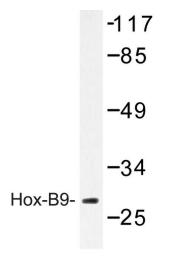

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2025 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### **GRIGENE** HOXB9 Rabbit Polyclonal Antibody – AP06674PU-M

Background:The Hox proteins play a role in development and cellular differentiation by regulating<br/>downstream target genes. Specifically, the Hox proteins direct DNA-protein and protein-<br/>protein interactions that assist in determining the morphologic features associated with the<br/>anterior-posterior body axis. Themammalian Hox gene complex consists of 39 genes that are<br/>located on four linkage groups, which are dispersed over four chromosomes. Hox genes that<br/>occupy the same relative position along the 5' to 3' coordinate (trans-paralogous genes) are<br/>more similar in sequence and expression pattern than adjacent Hox genes on the same<br/>chromosome. In mice, the HoxB cluster contains HoxB1 to HoxB9 and HoxB13, which are<br/>transcribed in the same direction. HoxB9 associates with the transcriptional cofactors BTG1<br/>and BTG2, which enhance HoxB9 ranscription. Alterations in HoxB9 expression, as with other<br/>Hox family member, has been implicated in leukemia.

Synonyms: Homeobox protein Hox-B9, Hox-2E, Hox-2.5
