Seta Catenin (CTNNB1) Rabbit Polyclonal Antibody – AP06683PU-M

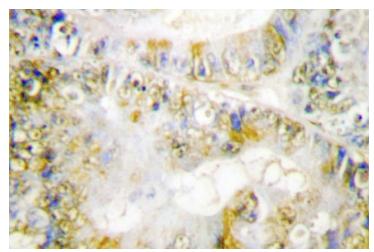

Background:β-Catenin is a key downstream effector in the Wnt signaling pathway. It is implicated in two
major biological processes in vertebrates: early embryonic development and tumorigenesis.
CK1 phosphorylates β-catenin at Ser45. This phosphorylation event primes β-catenin for
subsequent phosphorylation by GSK-3β. GSK-3β destabilizes β-catenin by phosphorylating it
at Ser33, Ser37, and Thr41. Mutations at these sites result in the stabilization of β-catenin
protein levels and have been found in many tumor cell lines.

Synonyms: CTNNB1, CTNNB, Beta-catenin
