#### STEE ATF6 beta (ATF6B) Rabbit Polyclonal Antibody – AP06751PU-M

Background:

Synonyms:

ATF-6 is a member of the basic-leucine zipper family of transcription factors. Endoplasmic reticulum stress causes cleavage of transmembrane ATF-6 and transclocation of active ATF-6 to the nucleus. Soluble ATF-6 can exist as either an ATF-6 $\beta$  homodimer or an ATF-6 $\alpha/\beta$  heterodimer. Binding of the ATF-6 $\beta$  homodimer or ATF-6 $\alpha/\beta$  heterodimer. Binding of the ATF-6 $\beta$  homodimer or ATF-6 $\alpha/\beta$  heterodimer to the nuclear transcription factor Y C (NF-YC) induces ER chaperone transcription. Human ATF-6 $\beta$  maps to 1q22-q23 gene locus.
