#### **CRIGENE** ELF5 Rabbit Polyclonal Antibody – AP06762PU-N

Background:Ets-1 is the prototype member of a family of genes identified on the basis of homology to the<br/>v-Ets oncogene isolated from the E26 erythroblastosis virus. This family of genes currently<br/>includes Ets-1, Ets-2, Erg-1–3, Elk-1, Elf-1, Elf-5, NERF, PU.1, PEA3, ERM, FEV, ER8I, Fli-1, TEL,<br/>Spi-B, ESE-1, ESE-3A, Net, ABT1 and ERF. Members of the Ets gene family exhibit varied<br/>patterns of tissue expression, and share a highly conserved carboxy terminal domain<br/>containing a sequence related to the SV40 large T antigen nuclear localization signal<br/>sequence. This conserved domain is essential for Ets-1 binding to DNA and is likely to be<br/>responsible for the DNA-binding activity of all members of the Ets gene family.<br/>Elf-5 is a member of the Ets family that may be involved in lung, mammary, prostate and<br/>kidney function, and may also play a role in tumorigenesis.

Synonyms:	E74-like factor 5, Elf-5
Protein Families:	Transcription Factors
