CDK6 Rabbit Polyclonal Antibody - AP08102PU-NBackground:Cdk6 is a member of the cyclin-dependent protein kinase (CDK) family. CDK family members
are highly similar to the gene products of Saccharomyces cerevisiae cdc28, and
Schizosaccharomyces pombe cdc2, and are known to be important regulators of cell cycle
progression. This kinase is a catalytic subunit of the protein kinase complex that is important
for cell cycle G1 phase progression and G1/S transition. The activity of Cdk6 first appears in
mid-G1 phase, and is controlled by regulatory subunits including D-type cyclins and members
of INK4 family of CDK inhibitors. This kinase, as well as CDK4, has been shown to
phosphorylate, and thus regulate the activity of, tumor suppressor protein Rb.Synonyms:PLSTIRE
