

Product datasheet for **AP09067HR-S**

Alkaline phosphatase / ALPI / IAP Goat Polyclonal Antibody

Product data:

Product Type:	Primary Antibodies
Applications:	ELISA, IHC, WB
Recommended Dilution:	ELISA: 1/10,000-1/50,000. Western blot: 1/1,000-1/5,000. Immunohistochemistry.
Reactivity:	Bovine
Host:	Goat
Isotype:	IgG
Clonality:	Polyclonal
Immunogen:	Alkaline phosphatase from calf intestine
Specificity:	This antibody detects bovine alkaline phosphatase. Cross reactivity against alkaline phosphatase from other tissues and species may occur but have not been specifically determined. Immuno-electrophoresis gives a single precipitin arc against anti-Peroxidase, anti-goat serum as well as purified and partially purified alkaline phosphatase [calf intestine].
Formulation:	0.02M Potassium phosphate, 0.15M Sodium chloride, pH 7.2 Label: HRP State: Lyophilized purified IgG fraction Stabilizer: 10 mg/ml BSA (immunoglobulin and protease free) Preservative: 0.01% (w/v) Gentamicin sulfate (Do NOT add Sodium azide!) Label: Horseradish peroxidase
Reconstitution Method:	Restore with 0.1 ml of deionized water (or equivalent).
Concentration:	lot specific
Purification:	multi-step process including delipidation, salt fractionation and ion exchange chromatography followed by extensive dialysis against the buffer
Conjugation:	HRP
Storage:	Store lyophilized at 2-8°C for 6 months or at -20°C long term. After reconstitution store the antibody undiluted at 2-8°C for one month or (in aliquots) at -20°C long term. Avoid repeated freezing and thawing.

Stability:	Shelf life: one year from despatch.
Database Link:	P19111
Background:	Alkaline phosphatase (ALP) removes phosphate groups from the 5' end of DNA and RNA, and from proteins, at high pH. Most mammals have 4 different isozymes: placental, placental like, intestinal and non tissue specific (found in liver, kidney and bone). Tissues with particularly high concentrations of ALP include the liver, bile ducts, placenta, and bone. Damaged or diseased tissue releases enzymes into the blood, so serum ALP measurements can be abnormal in many conditions, including bone disease and liver disease.
Synonyms:	Intestinal alkaline phosphatase
