GFP (Ads. to Hu, Ms, Rt Serum Proteins) Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies

Applications: ELISA, IHC, WB

Recommended Dilution: ELISA: 1/15,000-1/60,000.

Western blot: 1/1,000-1/5,000.

Immunohistochemistry on Frozen Sections: 1/500-1/3,000.

Reactivity: A. victoria

Host: Rabbit

Isotype: IgG

Clonality: Polyclonal

Immunogen: GST- Green Fluorescent Protein (GFP) fusion protein corresponding to the full length amino

acid sequence (246aa) derived from the jellyfish Aequorea victoria.

Specificity: This antibody is designed to detect GFP and its variants. It can be used to detect GFP by ELISA

(sandwich or capture) for the direct binding of antigen and recognizes wild type, recombinant

and enhanced forms of GFP.

Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-Rabbit Serum, anti-Peroxidase and purified and partially purified Green Fluorescent Protein (Aequorea victoria) Serum. No reaction was observed against Human, Mouse and Rat Serum Proteins.

Formulation: 0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2, 10 mg/ml BSA lgG and

Protease free, 0.01% (w/v) Gentamicin Sulfate

Label: HRP

State: Lyophilized Ig fraction Label: Horseradish Peroxidase

Reconstitution Method: Restore with 0.1 ml of deionized water (or equivalent).

Concentration: lot specific

Purification: This product was prepared from monospecific antiserum by Immunoaffinity Chromatography

using Green Fluorescent Protein (Aequorea victoria) coupled to agarose beads followed by

solid phase adsorption(s) to remove any unwanted reactivities.

Conjugation: HRP

GFP (Ads. to Hu, Ms, Rt Serum Proteins) Rabbit Polyclonal Antibody – AP09218HR-N

Storage: Store vial at 2-8°C prior to restoration. Following restoration product can be stored undiluted

at 2-8°C for one month or (in aliquots) at -20°C or below.

Avoid repeated freezing and thawing.

Centrifuge product if not completely clear after standing at room temperature.

Stability: Shelf life: One year from despatch.

Database Link: P42212

Background: Green fluorescence protein (GFP) is a 27 kDa protein derived from the jellyfish Aequorea

victoria, which emits green light (emission peak at a wavelenth of 509 nm) when excited by blue light (excitation peak at a wavelenth of 395 nm). Green Fluorescent Protein (GFP) has become an invaluable tool in cell biology research, since its intrinsic fluorescence can be visualized in living cells. GFP fluorescence is stable under fixation conditions and suitable for a variety of applications. GFP has been widely used as a reporter for gene expression, enabling researchers to visualize and localize GFP-tagged proteins within living cells without the need for chemical staining. Other applications of GFP include assessment of protein protein interactions through the yeast two hybrid system and measurement of distance between proteins through fluorescence energy transfer (FRET) protocols. GFP technnology

has considerably contributed to a greater understanding of cellular physiology.

YFP differs from GFP due to a mutation at T203Y; antibodies raised against full-length GFP

should also detect YFP and other variants.

Synonyms: Green fluorescent protein, GFP-Tag
