Background:	ZNF219 is a member of the Kruppel-like zinc finger family that is involved in a diverse range of biological processes. ZNF219 is a 77-kDa nuclear protein containing nine sets of C2H2 zinc finger structures. It may be involved in transcriptional regulation, it functions as a transcriptional repressor for the HMGN1 promoter

Western blot analysis of anti-ZNF219 Antibody (N-term) in 293 cell line lysates (35 ug/lane). ZNF219 (arrow) was detected using the purified Pab (1:60 dilution).

Formalin-fixed and paraffin-embedded human testis tissue reacted with ZNF219 antibody (N-term), which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.
