

# Product datasheet for AP12266PU-N

# PPT1 (N-term) Rabbit Polyclonal Antibody

## **Product data:**

#### OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Primary Antibodies
Applications:	IHC, WB
Recommended Dilution:	ELISA: 1/1,000. Western blot: 1/100-1/500. Immunohistochemistry: 1/50-1/100.
Reactivity:	Human, Mouse
Host:	Rabbit
lsotype:	lg
Clonality:	Polyclonal
Immunogen:	This antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide selected from the N-terminal region of human PPT1.
Specificity:	This antibody detects PPT1 (N-term).
Formulation:	PBS with 0.09% (W/V) Sodium Azide as preservative. State: Purified State: Liquid purified Ig fraction.
Concentration:	lot specific
Purification:	Protein G Chromatography eluted with high and low pH buffers and neutralized immediately, followed by dialysis against PBS.
Conjugation:	Unconjugated
Storage:	Store the antibody undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing.
Stability:	Shelf life: one year from despatch.
Gene Name:	palmitoyl-protein thioesterase 1
Database Link:	<u>Entrez Gene 5538 Human</u> <u>P50897</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

### CRIGENE PPT1 (N-term) Rabbit Polyclonal Antibody – AP12266PU-N

Background:Palmitoyl-protein thioesterase-1 (PPT1) is a lysosomal hydrolase that removes long-chain<br/>fatty acyl groups from modified cysteine residues in proteins. Mutations in PPT1 have been<br/>found to cause the infantile form of neuronal ceroid lipofuscinosis (INCL), and an animal<br/>model has been developed.1 The deduced PPT2 protein contains 302 amino acids, including<br/>a 27-amino acid leader peptide, a sequence motif characteristic of many thioesterases and<br/>lipases, and 5 potential N-linked glycosylation sites.2 PPT2 shares 18% amino acid identity<br/>with PPT1. Northern blot analysis detected a predominant 2.0-kb PPT2 transcript in the<br/>human tissues examined, with the highest expression in skeletal muscle; variable amounts of<br/>2.8- and 7.0-kb transcripts were also observed. Recombinant PPT2, like PPT1, possesses<br/>thioesterase activity and localizes to the lysosome. Since PPT2 could not substitute for PPT1<br/>in correcting the metabolic defect in INCL cells and was unable to remove palmitate groups<br/>from palmitoylated proteins that are routinely used as substrates for PPT1it has been<br/>postulated that PPT2 possesses a different substrate specificity than PPT1.

#### Synonyms:

PPT-1, Palmitoyl-protein thioesterase 1, Palmitoyl-protein hydrolase 1 **Predicted Molecular weight:** 34193 Da

Note:

### **Product images:**

The anti-PPT1 Pab is used in Western blot to detect PPT1 in mouse liver tissue lysate.

Formalin-fixed and paraffin-embedded human cancer tissue reacted with the primary antibody, which was peroxidase-conjugated to the secondary antibody, followed by AEC staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.
