Background: UCK2 catalyzes the phosphorylation of uridine monophosphate to uridine diphosphate. This is the first step in the production of the pyrimidine nucleoside triphosphates required for RNA and DNA synthesis. In addition, an allele of this gene may play a role in mediating nonhumoral immunity to Hemophilus influenzae type B.

Synonyms: UCK 2, Uridine-cytidine kinase 2, TSA903, UMPK

Note: Molecular weight: 29299 Da.

Western blot analysis of anti-UCK2 Antibody (N-term) pre-incubated with and without blocking peptide in HeLa cell line lysate. UCK2 (arrow) was detected using the purified Pab.

Formalin-fixed and paraffin-embedded human cancer tissue (hepatocarcinoma) reacted with the primary antibody, which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.
