

Product datasheet for AP13925PU-N

SPHK2 (C-term) Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies

IHC, WB **Applications:**

Recommended Dilution: ELISA 1:1,000.

Western blot 1:100 - 1:500.

Immunohistochemistry 1:50 - 1:100.

Reactivity: Human Host: Rabbit

Isotype: lg

Clonality: Polyclonal

Immunogen: This antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide

selected from the C-terminal region of human SPHK2.

Specificity: This antibody detects SPHK2 at C-term.

Formulation: PBS with 0.09% (W/V) sodium azide

State: Purified

State: Liquid Ig fraction

Concentration: lot specific

Purification: Protein G column, eluted with high and low pH buffers and neutralized immediately, followed

by dialysis against PBS.

Conjugation: Unconjugated

Storage: Store the antibody at 2 - 8 °C up to one month or (in aliquots) at -20 °C for longer. Avoid

repeated freezing and thawing.

Stability: Shelf life: one year from despatch.

Gene Name: sphingosine kinase 2

Database Link: Entrez Gene 56848 Human

Background:

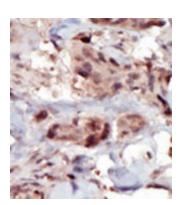

Sphingosine Kinase (SphK) catalyzes the phosphorylation of the lipid sphingosine, creating the bioactive lipid sphingosine-1-phosphate (S1P). S1P subsequently signals through cell surface G protein-coupled receptors, as well as intracellularly, to modulate cell proliferation, survival, motility and differentiation. SphK is an important signaling enzyme which is activated by diverse agents, including growth factors that signal through receptor tyrosine kinases, agents activating G protein-coupled receptors, and immunoglobulin receptors. Two SphK isotypes, SphK-1 and SphK-2, have been cloned, and both isotypes are ubiquitously expressed. SphK-1 has been shown to mediate cell growth, prevention of apoptosis, and cellular transformation, and is upregulated in a variety of human tumors. In contrast, SphK-2 increases apoptosis, and may be responsible for phosphorylating and activating the immunosuppressive drug FTY720.

Synonyms: SK2, SPHK2

Note: Molecular weight: 69217 Da

Product images:

The anti-SphK2 Pab is used in Western blot (Lane 1) to detect c-myc-tagged SphK2 in transfected 293 cell lysate (a c-myc antibody is used as control in Lane 2). Data is kindly provided by Dr. J. Van Brocklyn from the Ohio State University (Columbus, OH).

Formalin-fixed and paraffin-embedded human cancer tissue (breast carcinoma) reacted with the primary antibody, which was peroxidase-conjugated to the secondary antibody, followed by AEC staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.
