

# Product datasheet for AP14295PU-N

## Eph receptor B1 (EPHB1) Rabbit Polyclonal Antibody

## **Product data:**

#### **Product Type: Primary Antibodies Applications:** WB Recommended Dilution: ELISA: 1/1,000. Western blotting: 1/100 - 1/500. **Reactivity:** Human Host: Rabbit Isotype: lg **Clonality:** Polyclonal This antibody is generated from rabbits immunized with a his tag recombinant protein of Immunogen: human EphB1. Specificity: This antibody reacts to EphB1. Formulation: PBS with 0.09% (W/V) sodium azide State: Purified State: Liquid purified Ig **Concentration:** lot specific **Purification:** Prepared by Saturated Ammonium Sulfate (SAS) precipitation followed by dialysis against PBS **Conjugation:** Unconjugated Store the antibody undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Storage: Avoid repeated freezing and thawing. Stability: Shelf life: one year from despatch. Gene Name: EPH receptor B1 Database Link: Entrez Gene 2047 Human P54762

### Serigene Eph receptor B1 (EPHB1) Rabbit Polyclonal Antibody – AP14295PU-N

Background:Protein kinases are enzymes that transfer a phosphate group from a phosphate donor,<br/>generally the g phosphate of ATP, onto an acceptor amino acid in a substrate protein. By this<br/>basic mechanism, protein kinases mediate most of the signal transduction in eukaryotic cells,<br/>regulating cellular metabolism, transcription, cell cycle progression, cytoskeletal<br/>rearrangement and cell movement, apoptosis, and differentiation. With more than 500 gene<br/>products, the protein kinase family is one of the largest families of proteins in eukaryotes.<br/>The family has been classified in 8 major groups based on sequence comparison of their<br/>tyrosine (PTK) or serine/threonine (STK) kinase catalytic domains. The tyrosine kinase (TK)<br/>group is mainly involved in the regulation of cell-cell interactions such as differentiation,<br/>adhesion, motility and death. There are currently about 90 TK genes sequenced, 58 are of<br/>receptor protein TK (e.g. EGFR, EPH, FGFR, PDGFR, TRK, and VEGFR families), and 32 of<br/>cytosolic TK (e.g. ABL, FAK, JAK, and SRC families).

Synonyms: EPHT2, NET, HEK6, ELK, EPH2, Ephrin type-B receptor 1
