**Background:**

PTK6 is a cytoplasmic nonreceptor protein kinase which may function as an intracellular signal transducer in epithelial tissues. Overexpression of this gene in mammary epithelial cells leads to sensitization of the cells to epidermal growth factor and results in a partially transformed phenotype. Expression of this gene has been detected at low levels in some breast tumors but not in normal breast tissue. The encoded protein has been shown to undergo autophosphorylation.

**Synonyms:**

Tyrosine-protein kinase 6, Breast tumor kinase

Western blot analysis of anti-hPTK6-E26 Pab in A375 cell line lysate (35ug/lane). hPTK6-E26 (arrow) was detected using the purified Pab (1:50 dilution).

Formalin-fixed and paraffin-embedded human cancer tissue reacted with the primary antibody, which was peroxidase-conjugated to the secondary antibody, followed by AEC staining.
