Gene Name:	protein kinase C delta binding protein
Database Link:	Entrez Gene 112464 Human Q969G5
Background:	PRKCDBP was identified as a binding protein of the protein kinase C, delta (PRKCD). The expression of this protein in cultured cell lines is strongly induced by serum starvation, and was found to be down-regulated in various cancer cell lines, suggesting the possible tumor suppressor function of this protein.
Synonyms:	SRBC, hSRBC, Cavin-3
