# PIK3CB (C-term) Rabbit Polyclonal Antibody - AP14931PU-NBackground:Protein kinases are enzymes that transfer a phosphate group from a phosphate donor,<br/>generally the g phosphate of ATP, onto an acceptor amino acid in a substrate protein. By this<br/>basic mechanism, protein kinases mediate most of the signal transduction in eukaryotic cells,<br/>regulating cellular metabolism, transcription, cell cycle progression, cytoskeletal<br/>rearrangement and cell movement, apoptosis, and differentiation. With more than 500 gene<br/>products, the protein kinase family is one of the largest families of proteins in eukaryotes.<br/>The family has been classified in 8 major groups based on sequence comparison of their<br/>tyrosine (PTK) or serine/threonine (STK) kinase catalytic domains.

Synonyms: PI3K-beta

Western blot analysis of anti-PI3KCB Pab in Jurkat cell lysate. PI3KCB (arrow) was detected using purified Pab. Secondary HRP-anti-rabbit was used for signal visualization with chemiluminescence.

Formalin-fixed and paraffin-embedded human prostata carcinoma tissue reacted with PI3KCB antibody (C-term), which was peroxidaseconjugated to the secondary antibody, followed by DAB staining.
