PP1C gamma (PPP1CC) (N-term) Rabbit Polyclonal Antibody – AP15243PU-N

Background: Protein phosphatase-1 (PP1) is 1 of 4 major serine/threonine-specific protein phosphatases involved in the dephosphorylation of a variety of proteins. These enzymes work in opposition to the protein kinases to control the level of phosphorylation. Protein phosphatase (PP1) is essential for cell division, and it participates in the regulation of glycogen metabolism, muscle contractility and protein synthesis, as well as in regulation of ionic conductances and longterm synaptic plasticity. PP1 has 3 catalytic subunits, designated alpha (PPP1CA), beta (PPP1CB), and gamma (PPP1CC).

Synonyms:

PP-1G, PPP1G, PP1gamma

The anti-PPP1CC Pab is used in Western blot to detect PPP1CC in mouse colon tissue lysate.
