GRIGENE DUSP4 (C-term) Rabbit Polyclonal Antibody – AP15262PU-N

Background:DUSP4 is a member of the dual specificity protein phosphatase subfamily. These
phosphatases inactivate their target kinases by dephosphorylating both the
phosphoserine/threonine and phosphotyrosine residues. They negatively regulate members
of the mitogen-activated protein (MAP) kinase superfamily (MAPK/ERK, SAPK/JNK, p38), which
are associated with cellular proliferation and differentiation. Different members of the family
of dual specificity phosphatases show distinct substrate specificities for various MAP kinases,
different tissue distribution and subcellular localization, and different modes of inducibility of
their expression by extracellular stimuli. DUSP4 inactivates ERK1, ERK2 and JNK, is expressed
in a variety of tissues, and is localized in the nucleus.

Synonyms: MKP2, VH2, Dual specificity protein phosphatase 4
