

# Product datasheet for AP20297PU-M

# Alpha B Crystallin (CRYAB) Rabbit Polyclonal Antibody

## **Product data:**

#### **Product Type: Primary Antibodies** IHC **Applications:** Recommended Dilution: Immunohistochemistry on paraffin sections: 1/50-1/200. Human, Mouse, Rat **Reactivity:** Rabbit Host: **Clonality:** Polyclonal This antibody detects endogenous levels of Crystallin-αB protein. Specificity: Formulation: Phosphate buffered saline (PBS) with 0.05% sodium azide, approx. pH 7.2 State: Aff - Purified State: Liquid purified Ig fraction Concentration: 1.0 mg/ml **Purification:** Affinity-chromatography using epitope-specific immunogen; purity is > 95% (by SDS-PAGE) **Conjugation:** Unconjugated Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Storage: Avoid repeated freezing and thawing. Shelf life: one year from despatch. Stability: **Predicted Protein Size:** ~ 26 kDa Gene Name: crystallin alpha B Database Link: Entrez Gene 12955 MouseEntrez Gene 25420 RatEntrez Gene 1410 Human P02511

### Scrigene Alpha B Crystallin (CRYAB) Rabbit Polyclonal Antibody – AP20297PU-M

Background:The baculovirus protein p35 inhibits virally-induced apoptosis of invertebrate and<br/>mammalian cells and may function to impair the clearing of virally infected cells by the<br/>immune system of the host. This is accomplished at least in part by the ability of p35 to block<br/>both TNF- and FAS-mediated apoptosis through the inhibition of the ICE family of serine<br/>proteases. Two mammalian homologs of baculovirus p35, referred to as inhibitor of<br/>apoptosis protein (IAP) 1 and 2, share an amino-terminal baculovirus IAP repeat (BIR) motif<br/>and a carboxy-terminal RING finger. Although the c-IAPs do not directly associate with the TNF<br/>receptor (TNF-R), they efficiently block TNF-mediated apoptosis through their interaction with<br/>the downstream TNF-R effectors, TRAF1 and TRAF2. Additional IAP family members include<br/>ILP (for IAP-like protein) and survivin. ILP inhibits activated caspase-3, leading to the<br/>resistance of FASmediated apoptosis. Survivin (also designated TIAP) is expressed during the<br/>G2/M phase of the cell cycle and associates with microtubules of the mitotic spindle.<br/>Increased caspase-3 activity is detected when a disruption of survivinmicrotubule interactions<br/>occurs.

Synonyms:Alpha(B)-crystallin, CRYAB, Heat shock protein beta-5, Renal carcinoma antigen NY-REN-27,<br/>HspB5
