Background: C terminal Src kinase (CSK) is a non receptor protein tyrosine kinase. One of its major

functions is to specifically phosphorylate a conserved C terminal tyrosine of Src family kinases thereby down regulating their kinase activity. CSK is expressed ubiquitously as a protein of approximately 50 KDa in cytosol, but a fraction distributes to lipid rafts due to interaction

with the lipid raft associated protein PAG (CSK binding protein).

Synonyms: Tyrosine-protein kinase CSK, C-SRC kinase, Protein-tyrosine kinase CYL

Protein Families: Druggable Genome, Protein Kinase

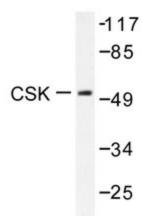

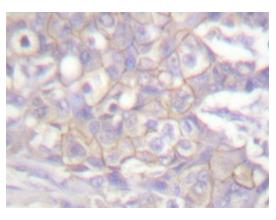

Protein Pathways:

Chemokine signaling pathway, Epithelial cell signaling in Helicobacter pylori infection, Neurotrophin signaling pathway, Regulation of actin cytoskeleton
