### **BUB3** Rabbit Polyclonal Antibody – AP20475PU-N

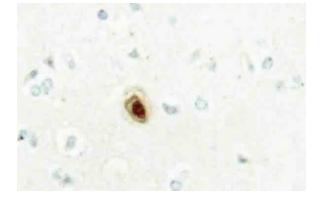

Background:The mitotic checkpoint protein Bub3 appears to be essential during normal mitotic<br/>progression, preventing premature sister chromatid separation, missegreation and<br/>aneuploidy. Bub3 is also important during G2 and early mitosis stages, promoting normal<br/>mitotic entry. Loss of Bub3 function causes slower progression through prophase, apparently<br/>due to mitotic cyclins A and B not being accumulated.

Synonyms:	BUB3L; hBUB3
Protein Families:	Druggable Genome
Protein Pathways:	Cell cycle
