	PITX1 Rabbit Polyclonal Antibody – AP20531PU-N
Background:	Pitx1 and Pitx2 are highly homologous, bicoid-related transcription factors. Pitx1 is a bicoid- related homeodomain factor that exhibits preferential expression in the hindlimb, as well as expression in the developing anterior pituitary gland and first branchial arch. Deletion of the Pitx1 locus results in decreased distal expression of the hindlimb-specific marker, the T-box factor (Tbx4). Pitx1 may modulate morphogenesis, growth and patterning of a specific hindlimb region, and serves as a component of the variables that influence morphological and growth distinctions in forelimb and hindlimb identity.
Synonyms:	Pituitary homeobox 1, BFT, PTX1
Protein Families	: Transcription Factors
