Neutrophil defensin 4 (DEFA4) Rabbit Polyclonal Antibody - AP20620PU-N

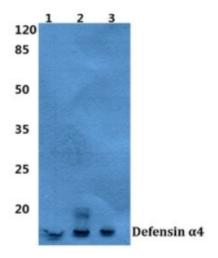

Background:

Human neutrophil alpha-defensins (also designated HNPs) are small, cationic, cysteine-rich antimicrobial proteins that play important roles in innate immunity against infectious microbes such as bacteri, a fungi and enveloped viruses. Alpha-defensins are synthesized as inactive precursors and are activated by proteolytic cleavage by MMP-7. Paneth cells in small intestinal crypts secrete the alpha-defensins, which are also termed cryptidins in mice. The cryptidin-4 gene is unique among the Paneth cell alpha defensins in that it is inactive in the duodenum, but expressed at maximal levels in the distal small bowel.

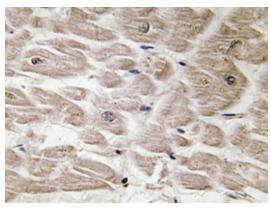

Synonyms: Neutrophil defensin 4, HNP-4, HP-4, DEFA4, DEF4

Protein Families: Secreted Protein
