	Cofilin 1 (CFL1) Rabbit Polyclonal Antibody – AP20685PU-M
Background:	Cofilin is ubiquitously expressed in eukaryotic cells where it binds to Actin, thereby regulating the rapid cycling of Actin assembly and disassembly essential for cellular viability. Cofilin is a low molecular weight protein that binds to filamentous F-Actin by bridging two longitudinally associated Actin subunits changing the F-Actin filament twist. This process is allowed by the dephosphorylation of Cofilin Ser 3 by factors such as opsonized zymosan. Lim kinase 1, a serine kinase, phosphorylates Cofilin and renders it unable to bind and depolymerise F-Actin.
Synonyms:	CFL1, CFL, p18
Protein Families:	Druggable Genome
Protein Pathway	s: Axon guidance, Fc gamma R-mediated phagocytosis, Regulation of actin cytoskeleton
