## EIF4EBP1 Rabbit Polyclonal Antibody - AP20714PU-S

**Background:** The translation of proteins from eukaryotic mRNA is initiated by the multisubunit complex

eIF-4F, which associates with the mRNA 5' cap structure. eIF-4E, a component of eIF-4F, is responsible for binding to the 5' cap structure and for the assembly of the eIF-4F complex.

The regulatory protein 4E-BP1, also referred to as PHAS-I, inhibits eIF-4E function.

Phosphorylation of 4E-BP1 by S6 kinase p70, MAP kinases or PKCs causes the disassociation of 4E-BP1 from eIF-4E, promoting translation. A protein that is functionally related to 4E-BP1,

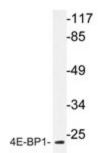

designated 4E-BP2, also associates with eIF-4E.

Synonyms: PHAS-I, PHAS-1, PHAS1

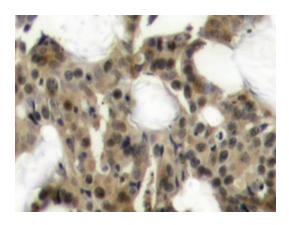

Protein Pathways: Acute myeloid leukemia, ErbB signaling pathway, Insulin signaling pathway, mTOR signaling

pathway
