KCNC4 Rabbit Polyclonal Antibody - AP21098PU-S

Background: KCNC4 (Potassium voltage gated channel subfamily C member 4) belongs to the delayed

rectifier class of channel proteins and is an integral membrane protein that mediates the voltage-dependent potassium ion permeability of excitable membranes. Assuming opened or closed conformations in response to the voltage difference across the membrane, the protein forms a potassium-selective channel through which potassium ions may pass in accordance

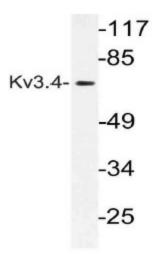

with their electrochemical gradient.

Synonyms: Potassium voltage-gated channel subfamily C member 4, Voltage-gated potassium channel

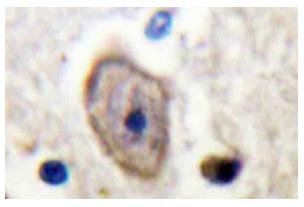

subunit Kv3.4, KSHIIIC

Protein Families: Druggable Genome, Ion Channels: Potassium, Transmembrane
