#### **CRIGENE** VCP Rabbit Polyclonal Antibody – AP21142PU-M

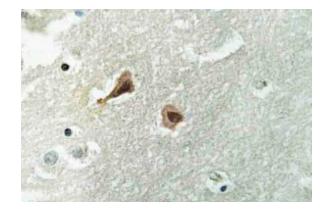

Background:Valosin-containing protein (VCP or p97) belongs to the AAA (ATPase associated activities)<br/>family and acts as a molecular chaperone to a wide variety of cellular activities. Some of<br/>these activities include the alteration of both nuclear and mitotic golgi membranes, ubiquitin-<br/>proteasome dependent protein degradation, regulation of the NF-kappa b pathway, and<br/>extraction of membrane proteins. VCP has been shown to contain a substrate binding<br/>domain (N) and two conserved ATPase domains (D1 and D2). The three dimensional<br/>structure of VCP resembles that of a cylinder with the D1 and D2 stacked upon one another<br/>in a homo-hexameric ring formation. VCP is involved in the formation of neuronal inclusion<br/>bodies in neurodegenerative disease such as Parkinsons Disease.

#### Synonyms: 15S Mg(2+)-ATPase p97 subunit, Valosin-containing protein
