	HFE Rabbit Polyclonal Antibody – AP21189PU-M
Background:	The protein encoded by this gene is a membrane protein that is similar to MHC class I-type proteins and associates with beta2-microglobulin (beta2M). It is thought that this protein functions to regulate iron absorption by regulating the interaction of the transferrin receptor with transferrin. The iron storage disorder, hereditary haemochromatosis, is a recessive genetic disorder that results from defects in this gene. At least nine alternatively spliced variants have been described for this gene. Additional variants have been found but their full-length nature has not been determined.
Synonyms:	dJ221C16.10.1; hemochromatosis; HFE1; HH; HLA-H; HLAH; MGC103790; MVCD7
Protein Families	: Druggable Genome, Transmembrane
