Cytochrome c Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies

Applications: ELISA, ID, IF, IP, R, WB

Recommended Dilution: This product is intended for use in precipitating and non-precipitating antibody-binding

assays (such as e.g., ELISA and Western blotting and Immunofluorescence or Histochemical techniques), to prepare an insoluble immuno-affinity adsorbent, for labelling with a marker

of

the customer's own choice.

Working dilutions in non-precipitating antibody-binding techniques: 1/1,000-1/10,000.

Reactivity: Equine
Host: Rabbit
Isotype: IgG

Clonality: Polyclonal

Immunogen: Cytochrome c is isolated and purified from Horse heart.

Freund's complete adjuvant is used in the first step of the immunization procedure.

Specificity: The reagents were evaluated for potency, purity and specificity using most or all of the

following techniques: Immunoelectrophoresis, Cross-Immunoelectrophoresis, single Radial

Immunodiffusion (Ouchterlony), block titration, ELISA, Immunoblotting and Enzyme

nhibition.

Cross-reactivities against enzymes of other sources may occur but have not been

determined.

Formulation: PBS, pH 7.2 stabilized with Dextran without preservatives and foreign proteins

State: Aff - Purified

State: Lyophilized purified IgG fraction

Reconstitution Method: Restore by adding 0.5 ml of sterile distilled water

Concentration: lot specific

Purification: Solid Phase Affinity Chromatography

Conjugation: Unconjugated

Cytochrome c Rabbit Polyclonal Antibody – AP21247PU-N

Storage: Store the antibody lyophilized at 2-8°C and reconstituted at 2-8°C for one week or (in aliquots)

at -20°C for longer.

If a slight precipitation occurs upon storage, this should be removed by centrifugation.

Stability: Shelf life: one year from despatc

Database Link: P00004

Background: Cytochrome c is an electron transporting protein that resides within the intermembrane

space of the mitochondria, where it plays a critical role in the process of oxidative

phosphorylation and production of cellular ATP. An increasing amount of interest has been directed toward the role which cytocrome c has been demonstrated to play in apoptotic processes. Following exposure to apoptotic stimuli, cytochrome c is rapidly released from the

mitochondria into the cytosol, an event which may be required for the completion of apoptosis in some systems. Cytosolic cytochrome c functions in the activation of caspase-3,

and ICE family molecule that is a key effector of apoptosis.

Synonyms: CYCS, CYC
