# **GAPDH Sheep Polyclonal Antibody**

#### **Product data:**

Product Type: Primary Antibodies

Applications: ELISA, ID, IF, IP, R, WB

**Recommended Dilution:** This product is intended for use in precipitating and non-precipitating antibody-binding

assays (such as e.g., ELISA and Western blotting and Immunofluorescence or Histochemical techniques), to prepare an insoluble immuno-affinity adsorbent, for labelling with a marker

of

the customer's own choice.

Working dilutions in non-precipitating antibody-binding techniques: 1/10-1/300.

Reactivity: Rabbit
Host: Sheep
Isotype: IgG

Clonality: Polyclonal

**Immunogen:** Glyceraldehyde-3-Phosphate Dehydrogenase isolated and purified from Rabbit muscle.

Freund's complete adjuvant is used in the first step of the immunization procedure.

**Specificity:** The antibody recognizes GAPDH from Rabbit muscle.

The reagents were evaluated for potency, purity and specificity using most or all of the following techniques: Immunoelectrophoresis, Cross-Immunoelectrophoresis, single Radial

Immunodiffusion (Ouchterlony), block titration, ELISA, Immunoblotting and Enzyme

Inhibition.

Cross-reactivities against enzymes of other sources may occur but have not been

determined.

**Formulation:** PBS, pH 7.2 without preservatives and foreign proteins

State: Azide Free

State: Lyophilized hyperimmune IgG fraction

**Reconstitution Method:** Restore by adding 1.0 ml of sterile distilled water

**Concentration:** lot specific

**Purification:** Ammonium Sulphate Precipitation and Ion Exchange Chromatography

Conjugation: Unconjugated

### GAPDH Sheep Polyclonal Antibody - AP21308AF-N

**Storage:** Store the antibody lyophilized at 2-8°C and reconstituted at 2-8°C for one week or (in aliquots)

at -20°C for longer.

If a slight precipitation occurs upon storage, this should be removed by centrifugation.

**Stability:** Shelf life: one year from despatch.

P46406

**Background:** Glyceraldehyde 3 phosphate dehydrogenase (GAPDH) is well known as one of the key

enzymes involved in glycolysis. Besides its functioning as a glycolytic enzyme in cytoplasm, recent evidence suggest that mammalian GAPDH is also involved in a great number of intracellular proceses such as membrane fusion, microtubule bundling, phosphotransferase activity, nuclear RNA export, DNA replication, and DNA repair. During the last decade a lot of findings appeared concerning the role of GAPDH in different pathologies including prostate cancer progression, programmed neuronal cell death, age-related neuronal diseases, such as Alzheimer's and Huntington's disease. GAPDH is constitutively expressed in almost all tissues at high levels, therefore becoming the marker of choice when a loading control in Western blotting is required. Some physiological factors, such as hypoxia and diabetes, increase

GAPDH expression in certain cell types.

**Synonyms:** GAPD, CDABP0047
