## LOC102163346 Rabbit Polyclonal Antibody

#### **Product data:**

Product Type: Primary Antibodies

Applications: ELISA, ID, IF, IP, R, WB

**Recommended Dilution:** This product is intended for use in precipitating and non-precipitating antibody-binding

assays (such as e.g., ELISA and Western blotting and Immunofluorescence or Histochemical techniques), to prepare an insoluble immuno-affinity adsorbent, for labelling with a marker

of

the customer's own choice.

Working dilutions in non-precipitating antibody-binding techniques: 1/10,000-1/100,000.

Reactivity: Porcine
Host: Rabbit
Isotype: IgG

**Clonality:** Polyclonal

**Immunogen:** Malic dehydrogenase is isolated and purified from Porcine heart.

Freund's complete adjuvant is used in the first step of the immunization procedure.

**Specificity:** The reagents were evaluated for potency, purity and specificity using most or all of the

following techniques: Immunoelectrophoresis, Cross-Immunoelectrophoresis, single Radial

Immunodiffusion (Ouchterlony), block titration, ELISA, Immunoblotting and Enzyme

nhibition.

Cross-reactivities against enzymes of other sources may occur but have not been

determined.

**Formulation:** PBS, pH 7.2 stabilized with Dextran without preservatives and foreign proteins

State: Aff - Purified

State: Lyophilized purified IgG fraction

**Reconstitution Method:** Restore by adding 0.5 ml sterile distilled water

**Concentration:** lot specific

**Purification:** Solid Phase Affinity Chromatography

**Conjugation:** Unconjugated

#### LOC102163346 Rabbit Polyclonal Antibody - AP21345PU-N

Storage: Store the antibody lyophilized at 2-8°C and reconstituted at 2-8°C for one week or (in aliquots)

at -20°C for longer.

If a slight precipitation occurs upon storage, this should be removed by centrifugation.

**Stability:** Shelf life: one year from despatch.

P11708

**Background:** Malate dehydrogenase catalyzes the interconversion of L-malate and oxaloacetate using

nicotinamide adenine dinucleotide (NAD) as a coenzyme. Malate dehydrogenase is found in all eukaryotic cells as two isozymes: mitochondrial (m-MDH) and cytoplasmic (soluble, s-MDH). Prokaryotes contain only a single form. The two isozymes, both consisting of two very similar subunits of about 35kD and having similar enzymatic activity appear as different proteins. There is structural similarity of mitochondrial malate dehydrogenase to L-3-hydroxyacyl CoA dehydrogenase and the cytoplasmic malate dehydrogenase to lactate

dehydrogenase.

**Synonyms:** MDHA, Malate dehydrogenase, cytoplasmic
