Background:	Members of the SLITRK family, such as SLITRK2, are integral membrane proteins with 2 N- terminal leucine-rich repeat (LRR) domains similar to those of SLIT proteins. Most SLITRKs, including SLITRK2, also have C-terminal regions that share homology with neurotrophin receptors. SLITRKs are expressed predominantly in neural tissues and have neurite- modulating activity.
Synonyms:	CXorf2, KIAA1854, SLITL1
