## **SFTPB Rabbit Polyclonal Antibody**

**Product data:** 

**Product Type:** Primary Antibodies

Applications: IHC, WB

**Recommended Dilution:** Immunohistochemistry on frozen sections: The typical starting working dilution is 1:50.

Immunohistochemistry on paraffin sections: The typical starting working dilution is 1:50.

Western blot: The typical starting working dilution is 1:50.

**Reactivity:** Bovine, Human, Mouse, Porcine

Host: Rabbit Isotype: IgG

Clonality: Polyclonal

Immunogen: Human-based 60-amino acid synthetic SP-B polypeptide

**Specificity:** This antibody detects SP-B. It recognizes proteins of 42, 25 and 18 kD under nonreducing

conditions. The 18 kD form is reduced to 7.7-8 kD in the presence of beta-mercaptoethanol.

Formulation: PBS

State: Purified

State: Liquid 0.2 µm filtered lg fraction Stabilizer: 0.1% bovine serum albumin Preservative: 0.02% sodium azide

Concentration: lot specific

Purification: Protein A

**Conjugation:** Unconjugated **Storage:** Store at 2 - 8 °C.

**Stability:** Shelf life: one year from despatch.

**Gene Name:** surfactant protein B

Database Link: Entrez Gene 6439 Human

P07988

## SFTPB Rabbit Polyclonal Antibody - AP26403PU-N

Background:

There are four surfactant-specific proteins, designated surfactant protein A (SP-A), SP-B, SP-C and SP-D respectively. SP-A and SP-D are hydrophilic surfactant proteins and are members of the collectin family. SP-B and SP-C are hydrophobic surfactant proteins and may be the most appropriate indicators for the evolutionary origin of surfactant.

SP-B is synthesized by the alveolar type II epithelial cells as a 40-42 kD precursor that is subsequently proteolytically processed to 7.8-8 kD. SP-B enhances the spreading and stability of surfactant phospholipids in the alveolus. SP-B is essential for air-breathing in mammals and is therefore largely conserved. SP-B can interact with both phospholipid head groups and fatty chains and is particularly active in enhancing surface active behaviour in endogenous and exogenous lung surfactants. Even low SP-B contents had measurable effects in increasing the adsorption, dynamic surface tension lowering, and/or film respreading of DPPC, mixed synthetic lipids, and column-purified lung surfactant phospholipids. Deficiency of SP-B and other surfactant components is associated with respiratory distress syndrome (RDS) in premature infants and adults with respiratory distress syndrome (ARDS).

Synonyms:

Surfactant protein B, SP-B, SFTP3
