	BCL2 Rabbit Polyclonal Antibody – AP26415AF-L
Background:	Bcl2 is a 25kDa inner mitochondrial membrane protein with anti-apoptotic function. It is believed that Bcl-2 suppresses apoptosis by inhibiting mitochondrial cytochrome C release, blocking caspase cascade and regulating mitochondrial calcium homeostasis. Bcl- 2 is identified from the study of B-cell lymphoma. About 90% of follicular lymphoma is caused by Bcl-2 overexpression resulted from the translocation of Bcl-2 gene from chromosome 18 to the immunoglobulin heavy chain enhancer on chromosome 14. Bcl-2 is also involved with other malignancies such as melanoma, breast cancer, prostate cancer and lung cancer.
Synonyms:	BCL2, Bcl-2 alpha
