Monkey IgA + IgG + IgM (Fc specific) Goat Polyclonal Antibody

Product data:

Product Type: Secondary Antibodies

Product Name: Monkey IgA + IgG + IgM (Fc specific) Goat Polyclonal Antibody

Applications: ELISA, ID, IF, IP, WB

Recommended Dilution: The cytochemical grade allows the use in different types of highly sensitive immunoassays on

appropriately treated cell and tissue substrates; in radioimmunoassay; for the production of

immunoconjugates with a selected marker; to prepare immunoaffinity adsorbents by coupling to an artificial carrier; in non-isotopic methodology based on solid phase

immunochemistry (e.g. ELISA), both as catching antibody and detection reagent; in Western blotting. This product is not pre-diluted. The optimum working dilution of each product

should be established by titration before being used.

Working dilutions:

For **histochemical and cytochemical** use are usually between 1/100 and 1/500.

In ELISA and comparable non-precipitating antibody-binding assays are between 1/1000

and 1/5000.

Reactivity: Monkey

Host: Goat

Immunogen: Highly purified immunoglobulin fractions containing IgG, IgA and IgM isolated from monkey

serum. Freund's complete adjuvant is used in the first step of the immunization procedure.

Isotype: lgG

Formulation: PBS, pH 7.2

No preservative added, as it may interfere with the antibody activity. No foreign proteins

added.

State: Azide Free

State: Lyophilised hyperimmune Ig fraction

Reconstitution Method: Restore with 1 ml sterile distilled water

Concentration: 10 mg/ml

Purification: DEAE-column Chromatography

Conjugation: Unconjugated

Monkey IgA + IgG + IgM (Fc specific) Goat Polyclonal Antibody - AP31436AF-N

Storage: Prior to reconstitution store at 2-8°C.

Following reconstitution store undiluted at 2-8°C for one week

or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing.

Note: Adsorption: Immunoaffinity adsorbed using insolubilized antigens as required to eliminate

antibodies crossreacting with other serum proteins. Special attention is given to the removal of antibodies to common lg/Fab. The use of insolubilized adsorption antigens prevents the

presence of excess adsorbent protein or immune complexes in the antiserum.
