

Product datasheet for AP31542HR-N

Canine IgM (Fc specific) Goat Polyclonal Antibody

Product data:

Product Type: Secondary Antibodies Canine IgM (Fc specific) Goat Polyclonal Antibody Product Name: **Applications:** ELISA, ID, IF, IHC, IP, WB **Recommended Dilution:** Can be used in enzyme-immunocytochemical and immunohistochemical staining for the detection of IgM at the cellular and subcellular level by staining of appropriately treated cell and tissue substrates; to demonstrate circulating IgM antibodies in serodiagnostic microbiology and autoimmune diseases; to identify a specific antigen using a reference antibody of dog origin known to be of the IgM isotype in the middle layer of the indirect test procedure; in non-isotopic assay methodology (e.g. ELISA) to measure IgM in dog serum or other body fluids. This immunoconjugate is not pre-diluted. The optimum working dilution of each conjugate should be established by titration before being used. Excess labelled antibody must be avoided because it may cause high unspecific background staining and interfere with the specific signal. Working dilutions: For **histochemical and cytochemical** use are usually between 1/100 and 1/500. In ELISA and comparable non-precipitating antibody-binding assays between 1/500 and 1/2000. **Reactivity:** Canine Host: Goat Purified normal IgM isolated from pooled dog serum. Freund's complete adjuvant is used in Immunogen: the first step of the immunization procedure. Isotype: lgG Formulation: PBS, pH 7.2 No preservative added, as it may interfere with the antibody activity. No foreign proteins added. Label: HRP State: Lyophilised hyperimmune Ig fraction Label: Horseradish Peroxidase Restore with 1 ml sterile distilled water **Reconstitution Method: Concentration:** 10 mg/ml

	Canine IgM (Fc specific) Goat Polyclonal Antibody – AP31542HR-N
Purification:	DEAE-column Chromatography
Conjugation:	HRP
Storage:	Prior to reconstitution store at 2-8°C. Following reconstitution store undiluted at 2-8°C for one week or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing.
Note:	Adsorption: Immunoaffinity adsorbed using insolubilized antigens as required to eliminate antibodies cross-reacting with other components of the immunoglobulin system or reacting with other serum proteins. Special attention is given to the removal of antibodies to common Ig/Fab. The use of insolubilized adsorption antigens prevents the presence of excess adsorbent protein or immune complexes in the antiserum.
