Background:	Retinol binding protein 4(RBP4) belongs to the lipocalin family and is the specific carrier for retinol in the blood. This protein was found to be expressed and secreted by adipose tissue, and was strongly associated with insulin resistance. It delivers retinol from the liver stores to the peripheral tissues. In plasma, the RBP-retinol complex interacts with transthyretin which prevents its loss by filtration through the kidney glomeruli.
Synonyms:	RBP-4, Retinol-binding protein 4, Plasma retinol-binding protein, PRBP, RBP
Protein Families:	Druggable Genome, Secreted Protein
