ACAT1 Rabbit Polyclonal Antibody - AP31744PU-N

Background: The ACAT1 mRNA encodes a mitochondrially localized enzyme that catalyzes the reversible

formation of acetoacetyl-CoA from two molecules of acetyl-CoA. The ACAT gene spans approximately 27 kb and contains 12 exons interrupted by 11 introns. Defects in this gene are associated with the alpha-methylacetoaceticaciduria disorder, an inborn error of isoleucine

catabolism characterized by urinary excretion of 2-methyl-3-hydroxybutyric acid, 2-

methylacetoacetic acid, tiglylglycine, and butanone.

Synonyms: ACAT; MAT; T2; THIL

Protein Pathways: Butanoate metabolism, Fatty acid metabolism, Lysine degradation, Metabolic pathways,

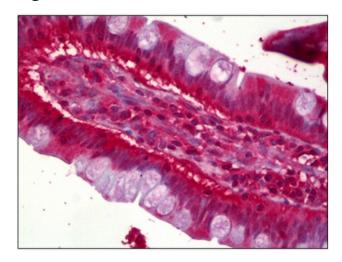

Propanoate metabolism, Pyruvate metabolism, Synthesis and degradation of ketone bodies, Terpenoid backbone biosynthesis, Tryptophan metabolism, Valine, leucine and isoleucine

degradation
