Product datasheet for AP31903PU-N

H2A.Z (H2AFZ) Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies
Applications: ELISA, IHC, WB
Recommend Dilution: ELISA.
Western Blot: 1/100-1/5000.
Immunohistochemistry: 1/100-1/200.

Reactivity: Human, Mouse, Rat
Host: Rabbit
Clonality: Polyclonal
Immunogen: Synthetic peptide derived from internal part of Human Histone H2A.Z.
Specificity: This antibody reacts with H2A/z.

Formulation: 0.1M Tris, 0.1M Glycine, 2% Sucrose
State: Purified
State: Lyophilized powder
Preservative: None

Reconstitution Method: Restore in distilled water
Concentration: lot specific
Purification: Protein A Chromatography

Storage: Lyophilized powder stable for a minimum of 2 years at -20°C.
Store reconstituted antibody at 2-4°C for one month or (in aliquots) at -20°C for longer.
Avoid repeated freezing and thawing.

Stability: Shelf life: Six months from despatch.
Database Link: Entrez Gene 3015 Human

This product is to be used for laboratory only. Not for diagnostic or therapeutic use.

Histones are basic nuclear proteins that are responsible for the nucleosome structure of the chromosomal fiber in eukaryotes. Nucleosomes consist of approximately 146 bp of DNA wrapped around a histone octamer composed of pairs of each of the four core histones (H2A, H2B, H3, and H4). The chromatin fiber is further compacted through the interaction of a linker histone, H1, with the DNA between the nucleosomes to form higher order chromatin structures. Histone H2A.Z is a replication-independent member of the histone H2A family that is distinct from other members of the family. Studies in mice have shown that this particular histone is required for embryonic development and indicate that lack of functional histone H2A leads to embryonic lethality.

Synonyms: H2AFZ, H2AZ, H2A/z
