## L-Kynurenic Acid Rabbit Polyclonal Antibody

**Product data:** 

**Product Type:** Primary Antibodies

Applications: ELISA

Recommended Dilution: ELISA: 1/8000.

**Host:** Rabbit

Clonality: Polyclonal

Immunogen: L-Kynurenic Acid KLH-conjugated

**Specificity:** This antibody detects L-Kynurenic acid.

Cross reactivity obtained with 3-Hydroxy-Kynurenine, was less than 0.2%. Thre was no no cross reactivity obtained with Indole Serotonin, or Quinoline.

Formulation: State: Serum

State: Lyophilized Serum

**Reconstitution Method:** Restore in aqua bidest to initial volume

Conjugation: Unconjugated

**Storage:** Store lyophilized at 2-8°C for 6 months or at -20°C long term.

After reconstitution store the antibody undiluted at 2-8°C for one month

or (in aliquots) at -20°C long term. Avoid repeated freezing and thawing.

**Stability:** Shelf life: one year from despatch.

Background: Kynurenic acid (KYNA or KYN) is a product of the normal metabolism of amino acid L-

tryptophan. It has been shown that kynurenic acid possesses neuroactive activity. It acts as an antiexcitotoxic and anticonvulsant, most likely through acting as an antagonist at excitatory amino acid receptors. Because of this activity, it may influence important neurophysiological and neuropathological processes. As a result, kynurenic acid has been considered for use in therapy in certain neurobiological disorders. Conversely, increased

levels of kynurenic acid have also been linked to certain pathological conditions.

Kynurenic acid was discovered in 1853 by the German chemist Justus von Liebig in dog urine,

which it was apparently named after. (1)

It is formed from L-kynurenine in a reaction catalyzed by the enzyme kynurenine—

oxoglutarate transaminase.

## L-Kynurenic Acid Rabbit Polyclonal Antibody – AP33374SU-N

Synonyms: kynuronic acid, quinurenic acid, transtorine, KynA, 4-hydroxyquinoline-2-carboxylic acid,

kinurenic acid

Note: **CAS numbe:** 492-27-3

Molecular formula: C10H7NO3 Molar mass: 189.168 g/mol Melting point: 282.5°C
