	OR52l2 (C-term) Rabbit Polyclonal Antibody – AP53078PU-N
Background:	Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response that triggers the perception of a smell. The olfactory receptor proteins are members of a large family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory receptors share a 7-transmembrane domain structure with many neurotransmitter and hormone receptors and are responsible for the recognition and G protein-mediated transduction of odorant signals. The olfactory receptor gene family is the largest in the genome. The nomenclature assigned to the olfactory receptor genes and proteins for this organism is independent of other organisms.
Synonyms:	Olfactory receptor OR11-12, Olfactory receptor 52l2
Note:	Molecular Weight: 38353 Da
Protein Families	: GPCR, Transmembrane
Protein Pathway	<b>/s:</b> Olfactory transduction
